

ATCO Class 3 Functional Hearing Assessment (FHA)

The ATCO medical certificate holder named below has recently had an audiogram that requires a functional hearing assessment under the UK Class 3 requirements.

This test should be undertaken:

- by a unit examiner separately or in parallel with a standard skills/competency test, and
- in the normal working environment or a noise field corresponding to normal working conditions (the test may be undertaken over several sessions to assess each aspect of the working task).

Name of ATCO / Certificate Holder:

CAA Reference Number of ATCO / Certificate Holder:

Place of Test: Date(s) of Test:

	Yes	No
Does the subject have any apparent difficulty with normal conversational speech?		
Can the subject hear normal ATCO communications satisfactorily in the presence of background noise in their own working environment, for example, equipment alarms, telephones?		
Can the subject hear flight crew and other RT voice communication satisfactorily in the presence of background noise from the flight deck/cockpit?		
Can the subject identify non-routine RT phraseology accurately?		
In summary, in your opinion, does the subject's hearing loss interfere with flight safety?
